## VB/I70 Superfund Site Exterior Lead-Based Paint Abatement

PRI, a contractor to the U.S. Environmental Protection Agency (EPA), is holding a conference to provide information for interested subcontractors and workers on an opportunity to conduct exterior lead-based paint abatement on residential properties within the VB/I70 Superfund Site (VB/I70). The VB/I70 Site is located in the north-central section of Denver, Colorado, and encompasses the neighborhoods of Cole, Clayton, Swansea, Elyria, southwest Globeville, and a northern section of Curtis Park. The exterior lead-based paint abatement entails the removal of chipping/peeling lead-based paint, covering the area with an encapsulant, and repainting the area. The abatement will need to be completed on homes within the VB/I70 area and will include partial or complete abatement of homes that contain deteriorating lead-based paint. The conference will include information on training opportunities, timelines, and required qualifications. PRI is anticipating abatement activities to begin approximately May 2006 and be completed September 2006.

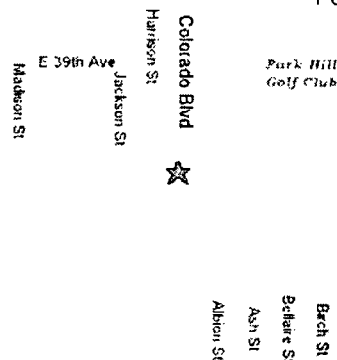

The conference will be held at the New Hope Baptist Church, 3701 Colorado Blvd, Denver and will be divided into two different information sessions.

### Subcontractor Session

February 17, 2006 @ 8:30 am MDT

### Individual Worker Session

February 17, 2006 @ 10:00 am MDT

Attached are general requirements for workers and subcontractors. Please join us to obtain additional information. If you cannot attend, contact us for the information as opportunities may still be available. Please contact Michelle Smith, (303) 295-2435, if you need additional information or clarification.
